Purpose of this document: The following table and figures are examples of formatting, along with an example of an in-text citation and its respective citation within the works cited section. These examples are for your reference.

Table 1: Data table of the Pearson correlation coefficient test results. The data included in the test compares the national adult obesity rate to the national diabetes rate. N represents sample size, r represents the test statistic, df represents the degrees of freedom, and the p-value represents significance with an alpha level of 0.05.

|	N	r	df	p-value
Adult obesity rate vs. national diabetes rate	51	-0.011	49	0.944

Figure 1: Scatterplot representation of adult obesity rate compared to the national diabetes rate. The r^2 value generated indicates low confidence in a linear relationship between adult obesity rate and diabetes rate.
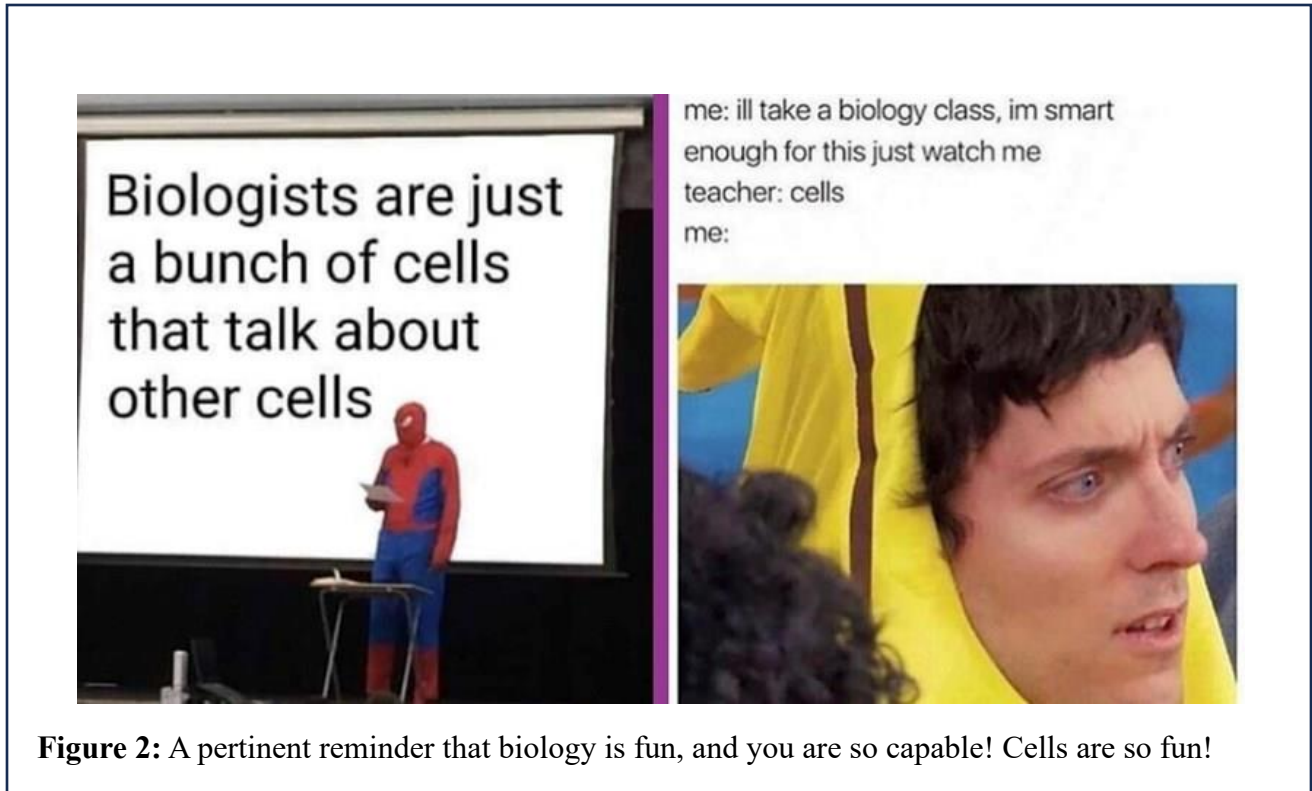

Figure 2: A pertinent reminder that biology is fun, and you are so capable! Cells are so fun!

This is an example of an in-text citation and its respective citation:

Models predict that diabetes prevalence in the United States will trend upwards in 2030 (Ampofo and Boateng 2020).
